PROJECT TAKEOVER QUESTIONNAIRE

PROJECT TAKEOVER QUESTIONNAIRE

Please answer the following questionnaire as best you can.
We will discuss any blanks or additional information at our first meeting.

UNDERSTANDING THE PROJECT

1 Can you demo your site/application for us?

2 Can you provide us with login access to your site/application for our developers to review?

3 Is the project complete? If not, what percent of it is complete (best guess)?

4 Are you aware of any known bugs?

5 Does it need many additional enhancements?

6 Is there any reason to believe there is bad coding or something that should be "thrown away"?

7 Do you need a gap analysis?

8 Would you like Logic's developers to try to break the site/application?

9 Is there a question of how much load the application can take on?

10 Do you like the current user interface/experiences?

PROJECT TAKEOVER QUESTIONNAIRE

11 Do you have a working relationship with the current/previous developers?

13 Do you have any existing documentation ?

12 Would you like your project to scale with users or functionality?

14 Are you okay with Logic deploying the application to our dev servers?

TESTING

Are you concerned about the performance or vulnerability of your site/application? We can perform a number of tests to ensure its speed and stability.

☐ Load Test — *A process of putting demand on a system or device and measuring its response performed to determine a system's behavior under both normal and anticipated peak load conditions.*

☐ Vulnerability Test — *A process of identifying, quantifying, and prioritizing (or ranking) the vulnerabilities in a system.*

☐ Stress Test — *A form of deliberately intense or thorough testing used to determine the stability of a given system or entity. It involves testing beyond normal operational capacity, often to a breaking point, in order to observe the results.*

☐ Functional Test — *A quality assurance (QA) process and a type of black box testing that bases its test cases on the specifications of the software component under test.*

☐ Usability Test — *A technique used in user-centered interaction design to evaluate a product by testing it on users.*

DOCUMENTATION

Based on what we've learned, if you don't have documentation, would you like us to create:

1 Functional Requirements? ☐ Yes ☐ No

2 Architecture Design? ☐ Yes ☐ No

3 Security Matrix? ☐ Yes ☐ No

4 Workflow Diagrams? ☐ Yes ☐ No

5 Use Cases? ☐ Yes ☐ No

CODE AND DATABASE REVIEW

These are examples of some questions we will ask ourselves about your site/application during our review. If you know the answers, or have comments, please add them below.

1 Is the code scalable?

4 Are there any open source components used?

2 Has it been written modularly?

5 Is the code well formatted?

3 Is there anything used that requires a license?

6 Do comments exist?

About Logic Solutions

Logic is a full-service custom web and mobile application development firm, specializing in content management, eCommerce, and mobile app technology. Our services include web and mobile programming, business analysis, consulting, user interface design, UI/UX analysis, solution architecture, application integration, and deployment. Logic was founded in 1995 in Ann Arbor, Michigan.
